

Energy Management Policy

In response to the rise in the significance of energy savings in construction industry, CR Construction Company Limited (“CRC”) is dedicated to improve the performance by creating a customer focused and continual improvement corporate culture through the adoption and implementation of an energy management system.

By application of ISO 50001:2018 requirements and by setting full compliance of statutory requirement as well as contractual obligations as minimum standards, CRC is committed to implementing and maintaining a high-level of energy management system.

CRC is committed to:

- complying with applicable legal requirements and other requirements to which we subscribe related to its energy use, consumption and efficiency;
- providing the framework for setting and reviewing energy objectives and targets;
- minimizing energy consumption and water usage;
- ensuring resources including energy, water and other raw materials are efficiently used;
- supporting new design for energy performance improvement and procurement of energy-efficient products and services;
- improving energy efficiency as a continuous improvement process;
- assuring availability of information and resources of energy consumption targets to meet our objectives and targets; and
- promoting energy saving awareness to staff and subcontractors.

This policy is communicated to and understood by all employees, including subcontractors and suppliers. This policy is kept under review regularly to satisfy the needs of CRC, its customers and stakeholders.
